

ABSTRACT OF THE DISCLOSURE

Input devices are provided. An exemplary input device for a computer comprises a housing, a position-determining system and a trackball. The position-determining system is mounted to the housing, and is operative to determine movement of the housing and to provide a first output corresponding to the movement of the housing. The trackball is mounted to the housing and is operative to rotate and to provide a second output corresponding to rotation of the trackball. Computer systems and other input devices also are provided.
